HERE FOR THE COMMUNITY

What is kidney disease?

Most people have two kidneys.

It is the job of the kidneys to remove wastes from the blood.

Kidney Disease is where the kidneys are damaged and can no longer filter waste from the blood, which can be serious if not diagnosed and treated.

What are the signs and symptoms of kidney disease?

Often in the early stages, signs and symptoms are not easily spotted. As the disease progresses, you may experience symptoms such as: nausea and vomiting; loss of appetite; fatigue; changes in your urine; muscle cramps; swelling of the feet and ankles; itching; chest pain; shortness of breath; and high blood pressure.

What services are available at Sengerema District Designated Hospital?

Holistic Kidney Care services are now available at

Sengerema District Designated Hospital, including dialysis for both inpatient and outpatient needs, consultation with nephrologists and specialized procedures.
